

Amazing Animals Fact sheets

Raptors

Raptors are identified as Birds of Prey that capture their food using their feet. They have three distinguishing features:

- large talons (or claws) used for hunting
- very keen eye sight to target prey
- sharp hooked beak for the tearing up of prey once caught

Hobby Falcon

The Hobby Falcon is native to Australia. It is known for its speed and agility especially when it comes to hunting.

Habitat

The Hobby Falcon have a widespread habitat, found throughout all of mainland Australia and across northern and eastern Tasmania.

Diet

Catching prey includes large flying insects, small mammals, bats and even small birds up to their own body size.
